	19.12.22	The tender stated that we shall provide a turnkey solution with all necessary hardware components that than will be operated by SOF Connect. Would a solution also be evaluated if we offer a solution where all server hardware will be hosted in our German data-center and SOF Connect will access these through a provided VPN connection?	Yes the solution will be evaluated as long as the relevant technical and financial offer includes the technical descriptions, methods and costs (total TCO) for the data communication required between the German data-center and SOF Connect, including all environments as well as business continuity and disaster recovery architectures, backup and interfaces with third party systems.	13.01.2023
